(a) Log-sum-exp dominates the max
g_1
g_2
$s = \max(g_1, g_2)$
s_τ, $\tau = 0.4$
s_τ, $\tau = 0.15$
violation statistic
slice through decision space
(b) Smooth gradient blending ($\tau = 0.15$)
π_1 (weight on g_1)
π_2 (weight on g_2)
softmax weight
